The He of the PoJent :

Pg No-2

Air Pollution is not a favorable condition for any living-being. It means, there is no element present in the composition of the natural air. This pollution in the composition of the natural air. This pollution comes under the category of environment pollution that affects air quality. For getting the grip of air pollution, the early morning starts. From the layer of fog and seeing the substance is not quite clear. Either smoke or harmful gas leads you on the curve of air pollution. If any living being is bound to reside in this ecology, then it is hard to live life as much as you can.

Generally air pollution happens in your surrounding as you burn coal, wood and any other fuel. As you burn any non-recyclable product around your living area, the produced fumes and smokes worsen air quality. The breathing air comes in the interaction of oxides of oxygen, sulphur and nitrogen. It has the effect of a poison whose identification is not easy.

OBJECTIVE

Page No-2

- our objectives for doing this project is to express our disapproval of air pollution as it has been the biggest cause of warming. So far things like greenhouse gases and car exhaust are the most common causes for air pollution.
- protect and enhance the quality of air resources and also protect public health and welfare which fosters a beneficial capacity.
- If we do not stop air pollution the ice caps in the north pole will eventually melt and the sea levels will rise. This flooding the low lying countries. It will kill many animals like polar bears.
- Air pollution is also destroying the ozone layer and lots of animals thus we must reduce it.
- At last we think that by doing a campaign this we can aware people of the cons of air pollution and let them what they can do to stop it.

The massive pollution's health. Their mission is to limit the emission of these harmful air pollution's. This leading industry has established its foundations in 1970. The origination of air pollution cannot be fully tamed, but it is easy to lessen the intensity of air pollution.

Most air pollution is the environment that arises due to energy utilization for doing certain activities. No matter what the purpose of burning the fossil is, some unexpected and the substances come in your environment. The climate and clean program list out fact that burning the fossil e.g. coal will release the harmful and suffocating chemical elements in air. Apart from this there is a high possibility of the

CONCLUSION - OR INFERENCE

P. 4 - 7

- Air Pollution is a major environmental issue. It can affect the health and life support systems, as well since clear air is an essential factor of life for respiration it is necessary to prevent the sources of air pollution.
- Air Pollution is of the most obvious and wide-spread type of pollution.
- Health effects of these pollutants include respiratory diseases, birth defects, heart attacks, cancer and developmental disabilities in children. Environment impacts include acid rain, depletion of stratospheric ozone, poisoning of forests and waters by acid rain and corrosion of building materials.
- We have made encouraging progress in controlling air pollution. Progress that has economic benefits as well as health benefits.

ACKNOWLEDGEMENT P.G-9

I would like to express my special thanks of gratitude to my respected Professor,

Buddhadev Mallick, Department of Zoology, Pamiyarni

Girls' College, for his sincere support and co-operation in the preparation of this project

on air pollution in the area of Gurgaon, Gurgaon

and its qualitative measurement in Environment Studies. Semester-I
